CHAPTER V

CONCLUSION AND SUGGESTION

A. Conclusion

According to the result of data analysis, the conclusion is drawn as follow:

The research question is how is students' self-confidence toward learning speaking during covid-19 pandemic at the third semester of English department in IAIN Parepare. The researcher has found that situational confidence was become the dominant aspects when the students learn during this covid-19 pandemic, because students felt confort when they express their self, studying at home brought a safe and peaceful atmosphere, this affected their self-confidence and increased their level of focus. The other side the students more communicational confidence and language potential then followed with average results then language ability became the last aspect that had a low level.

B. Suggestion

In this part some suggestion are addressed to the students, the teachers and the other researcher in the future.

1. for students

According to the findings, every student has different confidence when they express themselves in the class, but when they learn during online the students have more confidence then learning offline. For the students that category as the introvert it will make a positive effect for them because in this learning process less interaction with the other students.

2. For Teachers

       As we know nowadays especially this covid-19 has become a challenge for teachers to increase the way to present material in order to make students understand the learning for them, and make the students more confident when they learn English.

3. For other Researcher

       This research is not perfect yet, it is suggested to conduct further research on similar topics with a larger population or different group of students will be useful to give a better understanding of the issue of self-confidence during covid-19 pandemic.
